RBF DEFINITIONS

Physics Recognizes two and only two uniquely differentiable motion patterns.

Acceleration:

"The angular acceleration is ~~very~~ circumferential.

Linear acceleration is radial, *in respect to the operator*

Angular Acceleration.

As when a weight on the end of a string is swung in a circular pattern around and above one's head, and

2. Linear acceleration

As when the string holding the weight in circular orbit is released and the weight flies away on a radial course.

directly away from the weight and string operator.

RBF DEFINITIONS

Cycle:

"Convergence to frequency magnitude is tunability.

As with all wave phenomena, tunability is in terms of whole cycles to ~~converging to~~ ^{CONVERGING TO} ~~(levelled with ??)~~ a vertex.

Three intervals plus three events = tetra.

Four intervals plus four events = octa.

Five intervals plus five events = icsa.

There are no other fundamental cycles.

RBF DEFINITIONS

Death:

"This world" and "the next world"

"We don't have two Universes. Death is only the as-yet unexperienced... very long-wave, super-low frequencies. Both death and life are complementary functions of our electromagnetic experience."

Life's reality is constituted by the frequency identifications of the chemical elements and their atomic components as well as the vicinity transmittable elect frequencies of the spectrum's concentricity into positions (usually published as a chart of occurrences) along any radius of the complex system. Death's reality is constituted by the intervals between and beyond

RBF DEFINITIONS

Probability:

almost exclusively as it is employed to-day.

Nature's "Probability is not linear nor planar."

laws of sphericity of whole systems.

Probability is development of relations.

Probability is development of relations... of the universal environment of events and activities in response to the system and the self... imposed upon the considered system by the system itself.
